

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for May 2022.

The increased flow from 01st to 18th of May was due to seasonality effect, when the amount of water at intake was more than the Plant's capacity.

The increased flow for the dates 2nd, 11th and 12th of May was partially due to stops at generation and partially due to seasonality effect, when no water was drawn to intake.

The minimum permitted ecological flow of Paravani HEPP is 1,75 m³/sec.
