

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for April 2022.

The increased flow from 20th to 30th of April was due to seasonality effect, when the amount of water at intake was more than the Plant's capacity.

The increased flow for the dates 6th, 10th, 20th, 26th, 27th and 30th was due to stop at generation, when no water was drawn to intake

The minimum permitted ecological flow of Paravani HEPP is 1,75 m3/sec.
